💼 PROFESSIONAL EXPERIENCE

Nearpays Technologies Limited
Frontend Developer
02/2023 – present | Abuja, Nigeria
- Developed responsive, cross-browser compatible, and highly performant web applications using NextJs, and Tailwinds CSS
- Spearheaded technology strategy and execution, aligning technology initiatives with the company's growth objectives.
- Improved development processes by implementing CI/CD pipelines, reducing release cycles by 39%
- Oversaw the architectural design of software systems, ensuring scalability, security, and performance.
- Worked with version control systems and Source Code management tools (e.g. GIT) to keep track of code.

YourRider Limited
Frontend Developer, Azure DevOps Engineer
02/2020 – 11/2023 | Abuja, Nigeria
- Built and Maintained the company's landing page, admin dashboard and customers portal with React.
- Developed and maintained cross-platform mobile applications using react native, ensuring compatibility with both iOS and Android devices.
- Implemented complex features and functionalities using JavaScript and React native libraries.
- Optimized app performance, load times, and responsiveness, resulting in improved user satisfaction and retention.
- Integrated third-party APIs and services for additional functionalities, such as geolocation, push notifications, and authentication.
- Implemented and maintained Azure DevOps pipelines for continuous integration and deployment.

Fullstack Developer, IT Specialist
Fullstack Developer, IT Specialist
09/2021 – 12/2023 | Abuja, Nigeria
- Implemented server-side logic using Node.js, ensuring seamless communication between the frontend and backend.
- Designed and maintained databases, ensuring data integrity and efficient retrieval.
- Developed RESTful APIs to enable smooth data exchange between the client and server.
- Orchestrated the integration of frontend and backend components to create a cohesive and efficient full-stack architecture.
- Security and Performance Optimization:
- Implemented security measures, such as encryption and authentication, to safeguard user data.
- Conducted performance optimization, including database query optimization and server response time improvements.
